Kitchen & Bath Business **2018**
READERS' CHOICE AWARDS
WINNER

CATEGORY:
Kitchen Ventilation

**THANK YOU!
ZEPHYR WINS
READERS' CHOICE
AWARD FOR KITCHEN
VENTILATION**

FOUNDED BY A FAMILY, San Francisco-based Zephyr has been at the forefront of the ventilation industry for the past 20 years, effectively reinventing the category. With thoughtful designs and an ongoing commitment to technology, Zephyr elevates the kitchen hood from a purely utilitarian appliance to an eye-catching, artful centerpiece blending form and function at its finest.

With multiple styles and finishes from classic stainless steel to black stainless, black mirror and white, Zephyr has a solution for every range hood application. Integrated hoods, such as **Lux Island**, are ideal for those that prefer a discreet, hidden approach to ventilation and offer a truly open kitchen concept. Lux's powerful Perimeter Aspiration distributes airflow through narrow openings around the edge of the hood, increasing air velocity and enhancing performance.

As global style and technology continue to evolve, Zephyr is keeping pace with products such as its **Black Stainless** hoods, an alternative to stainless steel with a sleek, durable design that ensures each hood will stand up to the harshest cooking conditions.

ABOVE Lux Island is available in stainless steel and white in 43 and 63 inches.

BELOW LEFT Ravenna Island features a smoke-gray glass canopy that delicately curves over the island cooktop.

BELOW RIGHT Titan with PowerWave™ is available in five impressive size options from 36 up to 60 inches.

Zephyr hoods feature technological advancements such as **DCBL Suppression System™** that is an evolutionary step from the traditional AC powered range hood. This proprietary technology makes the hoods up to 77 percent more energy efficient with 77 percent less noise. Wireless remote controls allow cooks to adjust speed levels and lighting from more than 15 feet away. **Airflow Control Technology™ (ACT™)** is Zephyr's exclusive technology that gives the installer freedom to set the maximum CFM to accommodate local make-up air codes without compromising design. LED lights have breezed past halogen when it comes to illuminating the cooking surface, and Zephyr's cool-to-the touch, eco-friendly bulbs have a longer lifespan and clean glow that won't distort the color of food. Zephyr also offers hoods with colored LED lighting options in cloud white, deep blue and amber.

Adding to its **Core, Designer** and **Pro Collections**, Zephyr makes an indelible mark in the pro-style category with the new **Titan** hood. Delivering more power, using less energy and featuring a virtually silent motor, Titan is arguably Zephyr's most forward-thinking hood to date. Titan challenges the definition of professional style with its sleek curves, beveled edges and modern, professional-style design. The inside of the hood is just as sophisticated with the new 750 CFM **PowerWave™** internal blower for breakthrough power, performance and tranquility. PowerWave features three-phase AC power and aerodynamic blades that improve efficiency and help create a noise-free cooking environment. This versatile hood can be upgraded to an internal 1,300 CFM blower, which makes it the most powerful internal blower system on the market. In classic Zephyr style, Titan elevates the kitchen hood to a new level of design and technology. ★
