“Alexa, set Zephyr Fan Speed to 3”

Introducing Zephyr Connect

At Zephyr, we're transforming the kitchen through design, discovery and customer care. The Zephyr Connect App is our latest technology, bringing elevated functionality to the kitchen, supporting customers with enhanced service, and touchscreen convenience for our state-of-the-art products.

Connect to what matters

All you need is a Wi-Fi connection and Zephyr Connect allows you to control compatible range hoods from anywhere using your mobile device. It provides real-time diagnostics, product information and more. If issues arise, an error code will be triggered, allowing our Customer Care team to better diagnose and resolve the issue.

The whole package

Zephyr Connect is here to take Zephyr's technology to new heights—enhancing performance in the kitchen with a simple-to-use interface, it makes what used to seem impossible, possible. We are here to help you connect to what matters.

Customers can control compatible range hoods remotely from anywhere, changing fan speed, lighting and more. The app seamlessly connects with smart devices such as Amazon's Alexa or Google Home smart speakers for voice activation.

Convenience is amplified further with detailed product information, reminders for cleaning or filter purchase/replacement, or simply to turn a hood off after use.

The app also provides quick access to warranty information as well as a library of how-to videos.

Control range hood from your mobile device

Use with compatible smart speakers for voice control
