WHAT'S ON TAP?

Zephyr, the iconic brand that has elevated luxury kitchen design through supreme craftsmanship, unveils the industry's first at-home hybrid Presrv™ Kegerator & Beverage Cooler

Known for bringing the most innovative and stylish wine and beverage coolers to the market, Zephyr introduces another groundbreaking residential product—the Presrv™ Kegerator & Beverage Cooler. This industry-first hybrid at-home cooler features five distinct configurations with single, double and triple tap options, perfect for avid entertainers.

Blow guests away with this full-service party pleaser that can support one half-barrel keg with a single tap, two sixth-barrel kegs with a double tap, or up to three sixth-barrel kegs with a triple tap. The tap kits are sold separately according to your entertaining preference, and include the tap(s), CO2 tank, regulator and D-style keg coupler. The flexible, functional design also features two adjustable glass shelves that can store up to 53 cans of additional libations including seltzers, soda and sparkling water. And without the keg or tap, the unit transforms into a single zone beverage cooler with four glass shelves that can chill up to 107 cans of soda, seltzers, water or juice!

Suitable for both indoor and outdoor bar settings, the stylish 24-inch stainless steel unit is available in two options: an indoor model with a glass

display window and an outdoor-indoor model with a full stainless steel exterior. But Zephyr's inventive thinking doesn't stop with just the design and functionality—their expert team developed an industry-first, patent-pending installation kit that ensures under-counter integration of the hybrid Presrv™ Kegerator & Beverage Cooler is easy.

Zephyr considered every detail and included the PreciseTemp™ technology, which features multiple internal sensors for maintaining ac-

curate temperatures and offers a low temperature of 32 degrees F—one of the coldest units on the market. To ensure beer tastes fresh and cool to the very last drop, Zephyr engineered a Beer Line Cooling System, which blows cool air onto the beer line for a lasting chill, reducing the foam finish to deliver the best taste.

Upgrade your house parties and impress even the most finicky beer lover with the Zephyr Presrv™ Kegerator & Beverage Cooler. For more information, visit zephyronline.com.

The Zephyr Presrv® Kegerator & Beverage Cooler is suitable for indoor and outdoor spaces and can be designed into cabinetry or stand on it's own.
